Portfolio <https://jawadahmad.me/>

Mian Channu, Pakistan |

Full Stack Software Engineer experienced in designing and shipping production SaaS platforms used by more than 1,000 active users across web and mobile. Experienced building multi-tenant architectures, role-based systems, payroll automation, OCR pipelines, API integrations, and scalable business software. Comfortable owning features from database design to deployment while working directly with founders in fast-moving startup environments.

Professional Experience

2026 Full Stack Engineer – Salestrkr (2025 – Present) Remote ([Case study available on portfolio](#))

Responsibilities

- Built production CRM platform for field sales organizations
- Designed multi-tenant PostgreSQL architecture
- Built Admin, Accounting, Manager and Rep dashboards
- Developed payroll engine supporting commissions, holdbacks and pay multipliers
- Built AI OCR receipt processing
- Designed CSV import pipeline
- Built role-based permission architecture
- Published companion iOS application using React Native Expo
- Worked directly with founder on architecture, debugging and production deployments
- Shipped 126+ production pull requests

Achievements

- 1000+ production users
- Excel workflow replaced
- Payroll automation
- App Store deployment

2025 PF Cloud Virtualizer Replacement ([Case study on portfolio](#))

Responsibilities

- Developed production-ready backend services using Java and Vert.x
- Built and maintained customer and administrator dashboards using Vue.js
- Integrated Proxmox virtualization for automated VPS provisioning
- Designed automated billing and payment processing workflows
- Built REST APIs supporting customer, billing, infrastructure, and reporting modules
- Worked on production debugging, performance optimization, and system stability
- Collaborated on architecture improvements for real customer operations

Achievements

- 100+ production APIs
- 1000+ concurrent users
- 98.9% uptime
- Automated billing and VPS provisioning
- Reduced manual support workload by over 60%

2025

CloudMaster Pro (Case study on portfolio)

Responsibilities

- Led full-stack development using Java and React
- Designed authentication and role-based permission architecture
- Developed over 22 production APIs
- Built customer onboarding and virtual machine management workflows
- Designed relational database schema for production workloads
- Performed production debugging and performance optimization
- Worked directly on deployment and live issue resolution

Achievements

- Delivered production platform within four weeks
- 100+ active users
- Zero downtime incidents
- Automated 90% of operational workflows
- Reduced customer support tickets by 60%

2026

Qanoon Bridge Multi-Tenant Legal-Tech Platform (Final Year Project)

[\(https://qanoon-bridge.vercel.app/\)](https://qanoon-bridge.vercel.app/)

Responsibilities

- Designed complete multi-tenant PostgreSQL database architecture
- Built four role-based dashboards for Citizens, Lawyers, Admins, and Super Admins
- Developed a geographic lawyer matching engine with city, district, and province fallback logic
- Implemented secure RBAC middleware and tenant isolation
- Built full legal case lifecycle management
- Developed responsive frontend using Next.js and React
- Managed deployment and end-to-end system architecture

Achievements

- Complete end-to-end solo development
- Four production-ready dashboards
- Three-level geographic matching engine
- Fully tenant-isolated architecture
- Designed scalable legal workflow management

2025 (jun-sep)

LMS Edu Tool (Professional Project at LabD Tech, Faisalabad)

[\(https://jawadedugametools.netlify.app/\)](https://jawadedugametools.netlify.app/)

- Contributed to the development of a SCORM-compliant LMS during my tenure at LabD Tech, Faisalabad.
- Designed and implemented teacher-side modules for quiz creation, multimedia uploads, and JSON data export.
- Developed student-side features with interactive educational games, responsive UI, and mobile-optimized activities.
- Collaborated with the team to integrate dynamic content, game mechanics, and cross-platform compatibility.
- Deployed the platform on Netlify for fast, secure, and globally accessible performance.

2025

800batterie - Client Project (<https://800batterie.com/>)

- Built a fully responsive, mobile-first site with HTML5, SCSS (Flexbox/Grid) & ES6 JavaScript
- Implemented an interactive booking flow (WhatsApp/call integration, map tracking mock-ups, feedback prompts)
- Optimized performance (minified assets, lazy-loading, SVG icons) and streamlined deploys via Gulp

2025

HS Khan Educational website (<https://hskhaan.netlify.app/>)

- Built a fully responsive, mobile-first tutoring using semantic HTML5, CSS (Flexbox/Grid) vanilla JavaScript
- Developed dynamic features: tutor directory with filters, search, free trial registration, and WhatsApp integration
- Added animated counters (total tutors, jobs, ratings), interactive course sections (home, online, group, test prep)

Education

Bachelor of Science in Computer Science (2022 – 2026)
MNS University of Agriculture Multan (MNSUAM), Multan, Pakistan
CGPA 3.57 / 4.0

Higher Secondary School Certificate (FSc Pre-Engineering) (2020 – 2022)
Aspire Group of Colleges, Mian Channu, Pakistan
Marks 95 %

Secondary School Certificate (Matriculation) (2018 – 2020)
AL-KHAIR School, Mohsinwal, Mian Channu, Pakistan
Marks 89 %

Skills

Frontend: HTML5, CSS3 (Tailwind CSS), JavaScript (ES6+), React.js, React Native, Expo, Next.js

Backend: Node.js, Express.js, Supabase, PostgreSQL, REST APIs, Authentication, RBAC

Architecture: Multi Tenant SaaS, Database Design, OCR Pipelines, CSV Processing, Payroll Systems, Business Workflow Automation

Databases: MongoDB, SQL (MySQL), PostgreSQL

Version Control & CI/CD: Git, GitHub, Netlify,

Tools & Platforms: Visual Studio Code, Jupyter Notebook, VS Code

AI & Automation: ChatGPT, GPT-3/4, API integrations (OpenAI, Unsplash, TMDb)
